

May 2013 Email to Professor Brian Greene refuting his cat and general relativity argument. Details of Greene's arguments are [here](#).

Subject: Professor Greene, you are being mocked at physicsnext.org

Dear Esteemed Professor Greene,

My website physicsnext.org discusses your argument about general relativity and cats and mocks it, by making **this 2-line refutation**.

Humans can write/read literature, do mathematics, perform scientific experiments, argue philosophy, propose theories ... means humans are over the threshold, animals aren't. So assuming some super-intelligent aliens have answers to all the unsolved problems in physics (that humans have been struggling with), then in studying those we will NOT face the situation of a cat trying to understand general relativity which Greene describes.

I welcome and challenge you to send me your written response. I don't think you will, because your theory/argument is truly ridiculous and any written response will meet further decimation, and public posting of that refutation.

"Theory of Everything." Wow! We just can't have any less grand a name for theories nowadays...gone are the days of humble old Newton who said: "I seem to have been only like a boy playing on the sea-shore, and diverting myself in now and then finding a smoother pebble or a prettier shell than ordinary, whilst the great ocean of truth lay all undiscovered before me."

Thanks and regards,

Ashish Sirohi
